Table 4

Efficacy of immunotoxins involving Psuedomonas exotoxin A in killing PM 1 human breast cancer cells.

PM1 cells were incubated with immunotoxins for 2 h at 37°C, seeded out in soft agar, and colony formation was assessed as described in "Materials and Methods".

ITs with MAbs	Cell line	No. of	Log cell kill <sup>a</sup> at immunotoxin concentration of:

<sup>&</sup>lt;sup>a</sup> Calculated from observed number of colonies, taking into account the plating efficiency, and determined as logarithm of the number of cells killed by the treatment.

<sup>&</sup>lt;sup>b</sup> Mean of the results obtained in independent soft agar experiments, each performed in triplicate.

<sup>&</sup>lt;sup>c</sup> Each immunotoxin used at the concentration indicated.
